LOGESH V

AI & Data Science Engineer

logeshv44110v@gmail.com | +91 6383023077 | Coimbatore, Tamil Nadu | linkedin.com/in/logeshv-ai | github.com/Logesh-2004

SUMMARY

AI & Data Science graduate with experience as an AI Data & Research Associate on India's first AI shopping benchmark for agentic commerce. Skilled in Python, machine learning, LLM evaluation, RAG and prompt engineering; presented a secure health-record sharing paper at an international conference.

EDUCATION

B.Tech – Artificial Intelligence & Data Science | Kumaraguru College of Technology, Coimbatore | GPA: 7.0 *2023 – 2026*

Diploma – Mechatronics Engineering | Nachimuthu Polytechnic College | 83% *2020 – 2023*

SKILLS

Languages & Data: Python, C, C++, Pandas, Matplotlib, Data Analysis, Data Visualization, Data Validation
AI / ML: TensorFlow, Scikit-learn, OpenCV, Deep Learning, Computer Vision, NLP, LLM, RAG
Generative AI: Prompt Engineering, LLM Evaluation, Ollama, FastAPI, Vector Search, BM25, Semantic Reranking
Security: AES Encryption, Role-Based Access Control (RBAC), Secure Data Sharing
Web & APIs: ReactJS, JavaScript, HTML, CSS, PHP, REST APIs, Firebase
Robotics & Tools: ROS2, LiDAR Integration, Autonomous Navigation, Embedded Systems, Git, Fusion 360, 2D/3D CAD, 3D Printing

EXPERIENCE

AI Data & Research Associate | Quelinthos Technologies Pvt Ltd (Buy Through Words) *Jun 2026 – Oct 2026*

- Contributed to India's first AI shopping benchmark on agentic commerce, measuring the Big 5 foundational AIs (ChatGPT, Claude, Gemini, Grok, Muse) across 11 product verticals.
- Ran and refined shopping prompts on pro models with thinking enabled, following a consumer journey; the team ran ~30,000 queries.
- Manually checked every link the AIs returned to confirm it led to the correct product page, a different page, or a broken link.
- Worked as both a data collector and a blind rater in the benchmark's inter-rater reliability (IRR) process, used to produce its reliability score.

Tech: LLM Evaluation, Inter-Rater Reliability, Data Validation, Agentic Commerce, Prompt Engineering

Academic Performance Analytics Intern | Kumaraguru College of Technology *Nov 2025 – Apr 2026*

- Built a Python-based academic data pipeline (pandas, matplotlib) processing 500+ student records, automating report generation and reducing manual effort by ~70%.
- Built trend-extraction algorithms to flag at-risk student segments, enabling timely faculty intervention across 10+ departments.

Tech: Python, Pandas, Matplotlib, Data Analytics

Graduate Innovation Engineer Trainee | Forge Innovations & Ventures *Aug 2024 – Mar 2025*

- Built a ROS2 autonomous tow truck bot with LiDAR, improving manoeuvring accuracy by 25% via closed-loop PID control.
- Designed and validated 3+ rapid prototypes using iterative engineering workflows, cutting development cycle time by 30%.

Tech: ROS2, LiDAR, Python, Embedded Systems, Fusion 360, 3D Printing

RESEARCH PRESENTATION

Emergency-Aware Secure Electronic Health Record Sharing Using Encrypted QR Codes *Jun 2026*

- Presented at IconDeepCom 2026, the 5th International Conference on Deep Sciences for Computing and Communications (15–16 Jun 2026), SRM Institute of Science and Technology with Southern Taiwan University of Science & Technology.
- Co-authored with N. Rajathi, Jeevanathithya A and Chandhiraleka M.

Focus: Healthcare Technology, Secure Data Sharing, Encryption, Cybersecurity

PROJECTS

Secure EHR Sharing System Using Encrypted QR Codes | Final Year – Ongoing

- Built RBAC with AES-encrypted QR codes for secure health record sharing across 3 user roles, with biometric consent validation.
- Designed zero-trust encrypted backend ensuring HIPAA-aligned data privacy for medical record exchange.

Tech: Python, AES Encryption, QR Code, ReactJS, Firebase

Adaptive RAG Command Center | AI Observability & Evaluation Platform

- Built a production-style Adaptive RAG platform with Ollama, FastAPI, hybrid retrieval, semantic reranking and grounded response evaluation.
- Implemented metadata-aware retrieval routing, hybrid vector/BM25 search pipelines, and heuristic evaluation metrics to improve retrieval precision and reduce hallucinations.
- Designed an AI observability dashboard with retrieval tracing, confidence metrics and grounded answer inspection for debugging.

Tech: Python, FastAPI, Ollama, LangChain, Vector DB, BM25

ENVISIO – Accessible Web Portal for Special Children | Hackathon

- Built a WCAG 2.1-compliant web platform with 5+ accessibility-optimized UI workflows (screen reader support, adaptive contrast) for users with visual and cognitive impairments.
- Delivered a working MVP in a 24-hour hackathon using ReactJS and agile sprints, earning judges' recognition for UX impact.

Tech: ReactJS, JavaScript, HTML, CSS, WCAG 2.1

CERTIFICATIONS & ACHIEVEMENTS

IBM AI Engineering (Coursera) | Raptee.EV & ZOHO CodeVolt'25 | Wise-AI-thon | Hack With GDG Season 2 | Drone Design – IEEE Young Professionals | IEEE Ideathon (Intra College)
